

**FRESH ICE.
PURIFIED WATER.**

PRODUCED ON SITE

Engineered by Ice House America.

SMALL FOOTPRINT BIG OPPORTUNITY

The InLine Merchant utilizes all the features of the newly developed Ice Merchant and combines this with the ability to streamline the look of the machine within your new or existing store front. The InLine was designed in conjunction with a national retail partner to perform all operations from inside the store while providing the revolutionary look and consumer experience of a built-in ATM. This model still provides the same premium product 24/7, all while creating a flush look that eliminates big ice merchandisers currently clogging up a retailer's walkway.

INLINE MERCHANT

Our story

Founded in Moultrie, Georgia in 2003, Ice House America designs and manufactures equipment that produces ice and water where people need them. Our experience spans independent operators, retailers and businesses with different demands and operating models.

Made for your business

Make on-site ice and water part of your operation. IHA can help assess demand, equipment fit, installation and service needs. Choose graphics that belong to your business, with equipment engineered by Ice House America.

Support beyond installation

Stay connected to IHA for operator training, technical support, parts and service planning. Discuss the support options available for your equipment and location.

Warranty information

Request the current written warranty for the selected equipment and components before purchase.

Built into your location

The Inline Merchant integrates into a building facade, putting ice and water access at the storefront while locating equipment within the building. It suits businesses that want a built-in appearance and can plan the interior space, access and utilities required for installation.

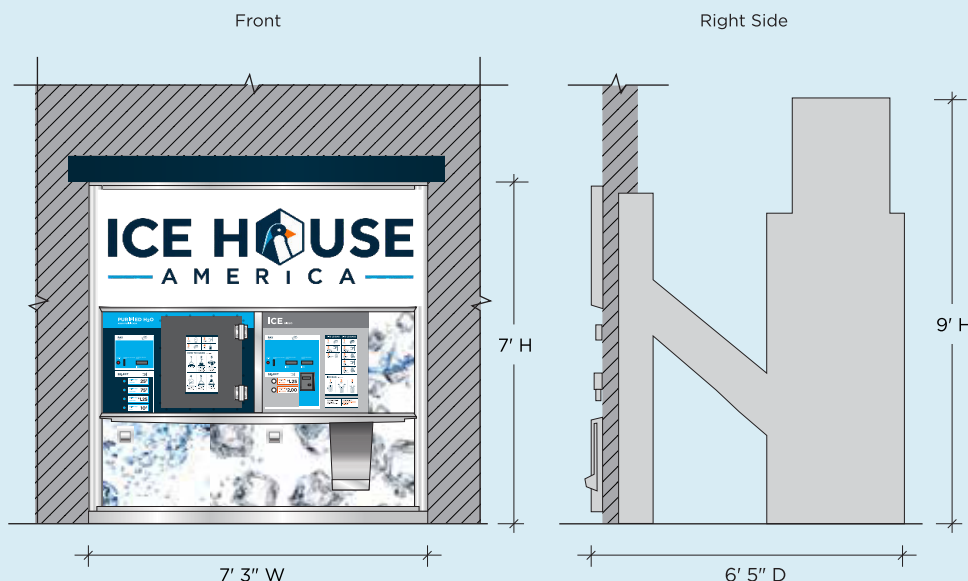

Water treatment options

Configure water treatment for your location and water supply. Sediment and carbon filtration and a water softener support ice and water production; reverse osmosis is an available option. Confirm the selected configuration with IHA.

SmartIce remote management

SmartIce connects operators with machine information, including sales and operating data. Review activity across locations, track performance and monitor service needs remotely. Ask IHA about the reporting, alerts and camera options available for your equipment.
